

Beta Version (Development II)

OutYah

Jamaica Outing Discovery Platform

Week 5 Deliverable (July 27 - July 31, 2026)

Student: Khrisean Stewart

Course: Special Projects

Date: 31 July 2026

Repository: https://github.com/KhriseanStewart/VTDI_Platform

Live app: <https://vtdi-platform.vercel.app>

1. Prototype v1 -> Beta summary

Prototype v1 established routing, discovery UI, maps, and planner flows on curated data. Beta completes backend integration, auth, admin, empty states, and production deployment configuration.

2. Features included in Beta

- Feed/Map discovery with category filters and search
- Venue detail, events, favorites, outing planner + directions
- Supabase Auth (email/password) and profile session UI
- Admin portal for places, events, posts, comment moderation
- RLS-secured Postgres schema and media storage bucket
- Empty/error states when catalogs are empty or offline
- Vercel hosting with SPA rewrites

3. How to run

```
bun install
cp .env.example .env    # add Supabase + Maps keys
bun run dev
# optional schema apply:
bun scripts/apply_supabase_schema.mjs
```

4. Database script location

- supabase/migrations/001_init.sql - schema + RLS
- supabase/seed.sql - optional sample seed
- supabase/full_setup.sql - combined apply script
- docs/database/ copies for submission package

5. Known limitations

- Live Instagram Graph sync not required; posts managed in admin.
- Plan stop drag-reorder UI is visual only; order follows add sequence.
- Email confirmation depends on Supabase Auth project settings.

6. Next phase (Week 6+)

- Formal testing report and user manual
- Bug bash and UI polish
- Final presentation package
