

Beta Version (Development II) + August Updates

OutYah

Jamaica Outing Discovery Platform

Week 5 deliverable (27-31 July 2026) with post-beta updates through 21 August 2026

Student: Khrisean Stewart

Course: Special Projects

Date: 21 August 2026

Repository: https://github.com/KhriseanStewart/VTDI_Platform

Live app: <https://vtdi-platform.vercel.app>

1. Prototype v1 -> Beta summary

Prototype v1 established routing, discovery UI, maps, and planner flows on curated data. Beta completed backend integration, auth, admin, empty states, and production deployment. August updates harden content quality: real Kingston venues, island-wide tourist catalog, six-month events calendar, Google-synced reviews, Tailwind UI recipes, and removal of mock social counts.

2. Features included in Beta (through July 31)

- Feed/Map discovery with category filters and search
- Venue detail, events, favorites, outing planner + directions
- Supabase Auth (email/password) and profile session UI
- Admin portal for places, events, posts, comment moderation
- RLS-secured Postgres schema and media storage bucket
- Empty/error states when catalogs are empty or offline
- Vercel hosting with SPA rewrites

3. Post-beta updates (August 2026)

3.1 Real place reviews

- New place_reviews table (migration 003) with source tags and RLS.
- Venue Reviews tab lists live Google Place Details snippets (most relevant + newest).
- Source badges (via Google / OutYah); signed-in users can post OutYah reviews.
- Place card ratings use Google aggregates; review counts match listed snippets.
- Invented Tripadvisor/Yelp/press seed copy and mock RSVP/like numbers removed.
- Instagram cannot supply venue reviews via API; IG remains posts/media only.

3.2 Kingston catalog and events

- Kingston venues seeded with real names, addresses, and Google/Street View photos.
- Events gained starts_at, ends_at, recurring, recurrence_note (migration 002).
- Status badges: Upcoming / Happening now / Past; feed shows next upcoming events.
- Events page covers the next six months island-wide (not week-only).

3.3 Island-wide catalog (19 August 2026)

- 36 new tourist places across Negril, Montego Bay, Ocho Rios, Portland, south coast, Blue Mountains, and Kingston extras (49 places total in production).
- 53 scheduled events Aug 2026 - Feb 2027: jerk festivals, Reggae Marathon, Rebel Salute, Jazz & Blues, Heroes Day, Christmas Market, NYE parties, recurring venue nights.
- scripts/data/jamaica_places.mjs and jamaica_events.mjs hold curated seed definitions.
- bun scripts/seed_jamaica_catalog.mjs upserts places + events in one step.
- bun scripts/seed_jamaica_island_photos.mjs syncs Google photos to Supabase Storage.
- Map and feed now span the full island, not Kingston metro only.

3.4 Landing, share plans, and photo moderation (21 August 2026)

- Branded landing page at / with Terobytez logo; Explore moved to /explore.
- Shareable outing plans: migration 004 shared_plans + /plan/share links; recipients can add stops.
- Planner stop reorder (move up / down) and Get Directions multi-stop Google Maps URLs.
- Users submit venue photos from place detail (pending); admins approve/reject in Posts queue (migration 005).
- Booking contact: call-to-book via phone; optional time-slot chips when curated on a place.

- Special Project proposal DOCX updated to as-built feature list matching the live site.

3.5 Admin and UI

- Admin nested in the main shell (auth gate only; no separate chrome).
- Place form: Jamaican parish dropdown, price bounds, cover/gallery upload to Storage.
- Google Places Autocomplete + map for lat/lng/address (hidden from raw form fields).
- Tailwind CSS v4 + shared UI recipes in src/lib/ui.js.

4. Backend Integration

OutYah uses Supabase as the catalog database. DataContext loads places, events, posts, and comments from PostgREST. AuthContext manages email/password sessions and profile roles. AppContext synchronizes favorites and ordered plan stops for signed-in users while retaining device-local selections for guests. Reviews load on demand from place_reviews via fetchReviewsForPlace / createPlaceReview.

4.1 Admin workflow

- Admin signs in and is authorized through profiles.role.
- Dashboard displays catalog totals.
- Places, events, and posts can be created, updated, and deleted.
- Place media uploads go to the public media storage bucket.
- Public pages refresh from Supabase after admin changes.

4.2 Review sync scripts

```
# Island-wide places + 6-month events
```

```
bun scripts/seed_jamaica_catalog.mjs
```

```
# Google photos (island venues)
```

```
bun scripts/seed_jamaica_island_photos.mjs
```

```
# Apply reviews schema + pull Google Place Details reviews
```

```
bun scripts/seed_real_place_reviews.mjs
```

```
# Kingston venues / photos (service role + Maps key)
```

```
bun scripts/seed_kingston_places.mjs
```

```
bun scripts/seed_place_photos_from_google.mjs
```

4.3 Live catalog totals (production Supabase)

- 49 places across 9 parishes (Kingston, Westmoreland, St. James, St. Ann, Portland, St. Elizabeth, Trelawny, St. Andrew, St. Catherine).
- 53 events with starts_at/ends_at spanning Aug 2026 through Feb 2027.
- 198 Google-sourced review snippets in place_reviews (27 venues synced).
- See docs/database/CATALOG.md for parish breakdown and event highlights.

5. How to run

```
bun install
```

```
cp .env.example .env # add Supabase + Maps keys
```

```
bun run dev
```

```
# optional schema apply:
```

```
bun scripts/apply_supabase_schema.mjs
```

6. Database script location

- supabase/migrations/001_init.sql - core schema + RLS
- supabase/migrations/002_events_schedule.sql - event schedule columns
- supabase/migrations/003_place_reviews.sql - place_reviews + stats trigger
- supabase/seed.sql / full_setup.sql - optional combined apply
- docs/database/ - submission copies of schema scripts + CATALOG.md

7. Acceptance Checks

- Production build passes; Vercel deep links resolve via SPA rewrite.
- Supabase tables, RLS, and media bucket exist; place_reviews publicly readable.
- Venue Reviews tab shows Google-sourced text with source badges.
- Admin routes reject signed-out and non-admin users.
- Production Supabase seeded: 49 places, 53 events, 198 Google reviews.
- Map spans Negril, MoBay, Ocho Rios, Portland, south coast, and Kingston.
- Event cards do not invent going/interested counts; IG likes hidden when zero.
- Live app: <https://vtidi-platform.vercel.app>

8. Known limitations

- Google Place Details returns a small sample of reviews (not the full public total).
- Tripadvisor blocks automated scraping; not synced live.
- Instagram Graph tokens optional; no venue-review API from Instagram.
- Event RSVP is not implemented; going/interested remain unset.
- Plan stop drag-reorder UI is visual only; order follows add sequence.
- Email confirmation depends on Supabase Auth project settings.

9. Next phase

- Formal testing report and user manual
- Optional RSVP and live hours from Google Places Opening Hours
- Final presentation package
